SUMMARY

Master of Science in Information Technology, GLS University | Full Stack Developer & Aspiring Software Engineer | Portfolio - <https://nisarg-prot.netlify.app/>

PROJECTS

MealSnap – AI Smart Nutrition Assistant

Capstone Project • mealsnapai2.netlify.app/

- Contributed to an AI powered nutrition assistant that identifies food items from photos and returns nutrition data in 4-5 seconds.
- Developed a full stack AI powered nutrition tracking platform featuring real-time nutrition insights, personalized recommendations, and daily intake tracking.
- Built nutrition analysis workflows that transformed scanned meal data into detailed calorie, ingredient, and macronutrient insights.

WalkUp – E-Commerce Platform (MERN Stack)

Solo Project • walkup.mern.netlify.app

- Built a full stack e-commerce platform using the MERN stack, featuring product catalog management, user authentication, cart functionality, and order processing.
- Implemented JWT based authentication and authorization with role-based access control for customer and admin accounts.
- Designed a Redux managed shopping cart and order management system to streamline the cart to checkout flow.
- Built a dedicated admin panel for real-time product and order management.

Admission Management System (MERN Stack)

- Owned full stack development (frontend + backend) for a student admission portal handling student enrollment and course selection
- Implemented JWT authentication with role-based access for student and admin user types
- Built a responsive enrollment and course selection interface using React and Redux.

Vertex University Admission Management System (Flutter, Mobile)

- Built a cross platform admission management system with role-based access control, enabling end to end admission processing for students and administrators.
- Designed a 3 stage application workflow (Submitted → Under Review → Approved/Rejected) with real-time status tracking visible to both students and admins
- Implemented document upload (photo, ID, marksheet) and a dynamic course catalog of programs with per seat limits and minimum eligibility thresholds
- Built an admin dashboard surfacing live application statistics (total, pending, approved, rejected) to support admission decision making
- Independently delivered the majority of the application, with a MongoDB backed data layer.

Smart Waste Classification (CNN)

Semester Project

- Trained a CNN model to classify waste into 6 categories (e.g. plastic, paper, metal, trash) using a dataset of 6,289 labeled images.
- Built the full image preprocessing and training pipeline using TensorFlow/Keras, from data augmentation to model evaluation.

EDUCATION

Master of Science in Information Technology

GLS University • 2027

Bachelor of Science in Information Technology

GLS University • 2025

CERTIFICATIONS

Data Structures & Algorithms - Apna College

Technology Job Simulation - Deloitte Australia

Seminar on Professional Skills - GLS UNIVERSITY

SKILLS

Programming Languages: Java, Python, JavaScript

Frontend: React.js, HTML5, CSS3

Backend: Node.js, Express.js

Databases: MongoDB, MySQL

Tools & Version Control: Git, GitHub
